Education

Information Technology University - Lahore, Punjab

Sept 2022 – June 2026

- Bachelor of Science in Computer Science
- **Relevant Coursework:** Data Structures, Algorithms Analysis, Artificial Intelligence, Database Management.

Punjab Group of Colleges — Lahore, Punjab

Oct 2020 – June 2022

- Intermediate in Pre-Engineering

Technical Skills

Languages: C++, HTML/CSS, JavaScript, SQL, Python.

Frameworks & Tools: React.js, Next.js, Flutter, Node.js, Express.js, Tailwind CSS.

Databases & Cloud solutions: MongoDB, REST APIs, Netlify.

Developer Tools: Git, GitHub, Docker, Linux, VS Code, Visual Studio.

Projects

Quran Recitation App (Final Year Project)

[github](#)

- Developed a cross-platform mobile app providing real-time feedback on Quranic recitation accuracy using OpenAI's Whisper model for speech-to-text alignment.
- Improved recitation error detection metrics by **25%** through iterative model fine-tuning workflows executed over a custom-collected training dataset.
- Optimised model inference latency, reducing response processing time from **10 seconds** to **1 second** via post-training INT8 quantization and local deployment using TensorFlow Lite.
- **Tech Stack:** Flutter, Whisper API, TensorFlow Lite, Python, Dart.

Quran Audio Data Collection Platform

[github](#)

- Engineered a responsive full-stack web platform optimized to crowdsource high-quality audio recordings for downstream AI model parsing.
- Implemented custom user authentication schemas, file-system bound audio upload parsing logic, and validation status metadata fields.
- Scaled platform data ingestion to successfully crowdsource and catalog over **15,000+** distinct audio verse recordings from unique community contributors.
- **Tech Stack:** React.js, Node.js, MongoDB, Express.js, REST APIs.

University Management Portal (CMS)

[github](#)

- Built a comprehensive data-driven content management engine enabling multi-tier university workflow scheduling, tracking, and access allocation.
- Formulated secure role-based access control (RBAC) middleware supporting Admin, Instructor, and Student scopes via signed JSON Web Tokens (JWT).
- Integrated analytical control views rendering tracking metrics reflecting course progression updates and individual grade distributions.
- Accelerated administrative query response times by **35%** through strategic database indexing on high-frequency student and course schema records.
- **Tech Stack:** React.js, Node.js, MongoDB, Express.js, JWT.

E-commerce Platform

[github](#)

- Created a commercial-ready storefront featuring a centralized production pipeline, a user product catalog interface, shopping cart instances, and active order pipelines.
- Wrote decoupled, modular asynchronous RESTful APIs managing high-throughput indexing adjustments and document persistence structures.
- Reduced average server response latency by **40%** during high-throughput stress testing by implementing optimized MongoDB aggregation pipelines and query structures.
- **Tech Stack:** MongoDB, Express.js, React.js, Node.js, REST APIs.
